

Technical data sheet
Repair conecto sinus
08NC300/24-R

A flat steel profile with a sinusoidal gap on top for high loads, used to repair damaged concrete floors.

The profiles are used to protect the edges of concrete slabs ensuring the possibility of horizontal compensation. This joint do not transfer loads between concrete slabs and do not blocked vertical movements.

It is possible to order a profile made of stainless steel, black steel or any mix.
Standard profile length L = 3000 mm.

Maximum load sizes:

- for trucks (DIN 1072) - 600kN
- for forklifts (DIN1055-3) - G6 190kN:
- for pallet lifts (Ø 150mm, t = 100 mm) - 13kN
